iRODS User Meeting

CCT: Center for Computation & Technology @ LSU

LONI brings:

- + fat pipes (40Gb/s) and vast computing resources (100 Tflops)
- missing a distributed data management and storage infrastructure

Our Goals:

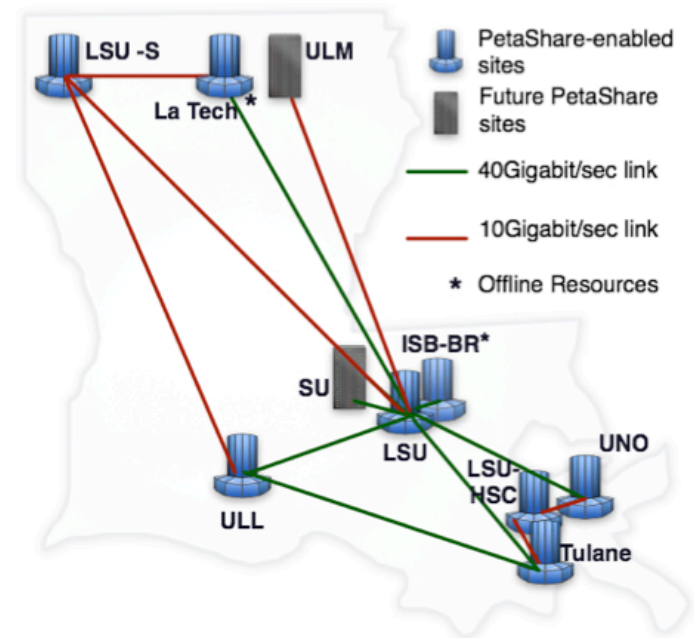

- Bring additional storage to LONI
- Provide a CI for easy and efficient storage, access, and management of data.

“Let scientists focus on their science rather than dealing with low level data issues. The CI should take care of that.”

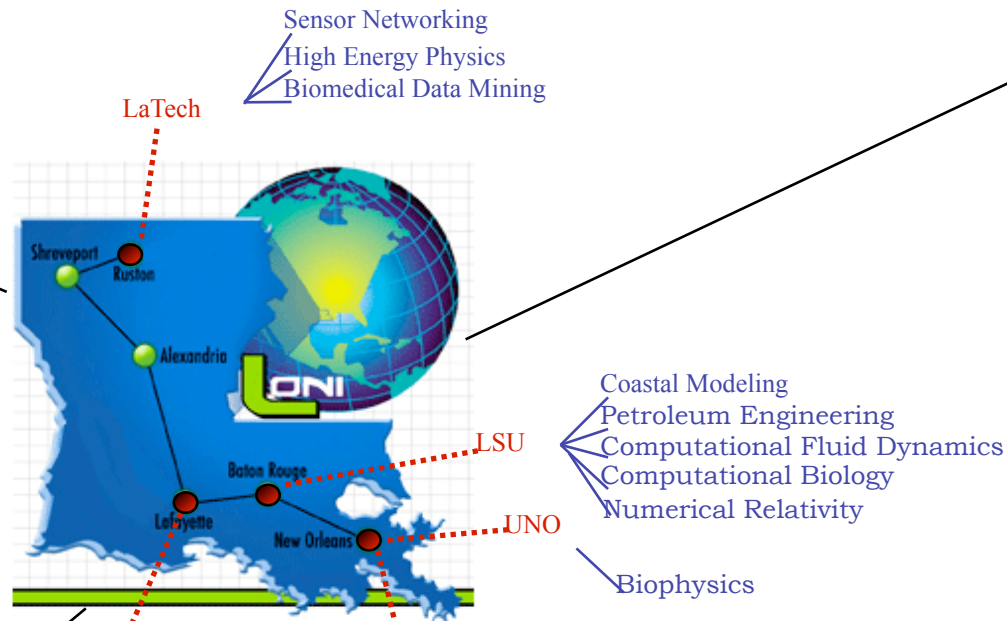

- **Goal:** Enable domain scientists to focus on their primary research problem, assured that the underlying infrastructure will manage the low-level data handling issues.
- **Novel approach:** Treat data storage resources and the tasks related to data access as first class entities just like computational resources and compute tasks.
- **Key technologies** being developed: **Data-aware storage systems**, **data-aware schedulers** (i.e. Stork), and **cross-domain meta-data scheme**.
- **Provides** an additional 300TB disk, and 400TB tape storage (and access to national storage facilities)

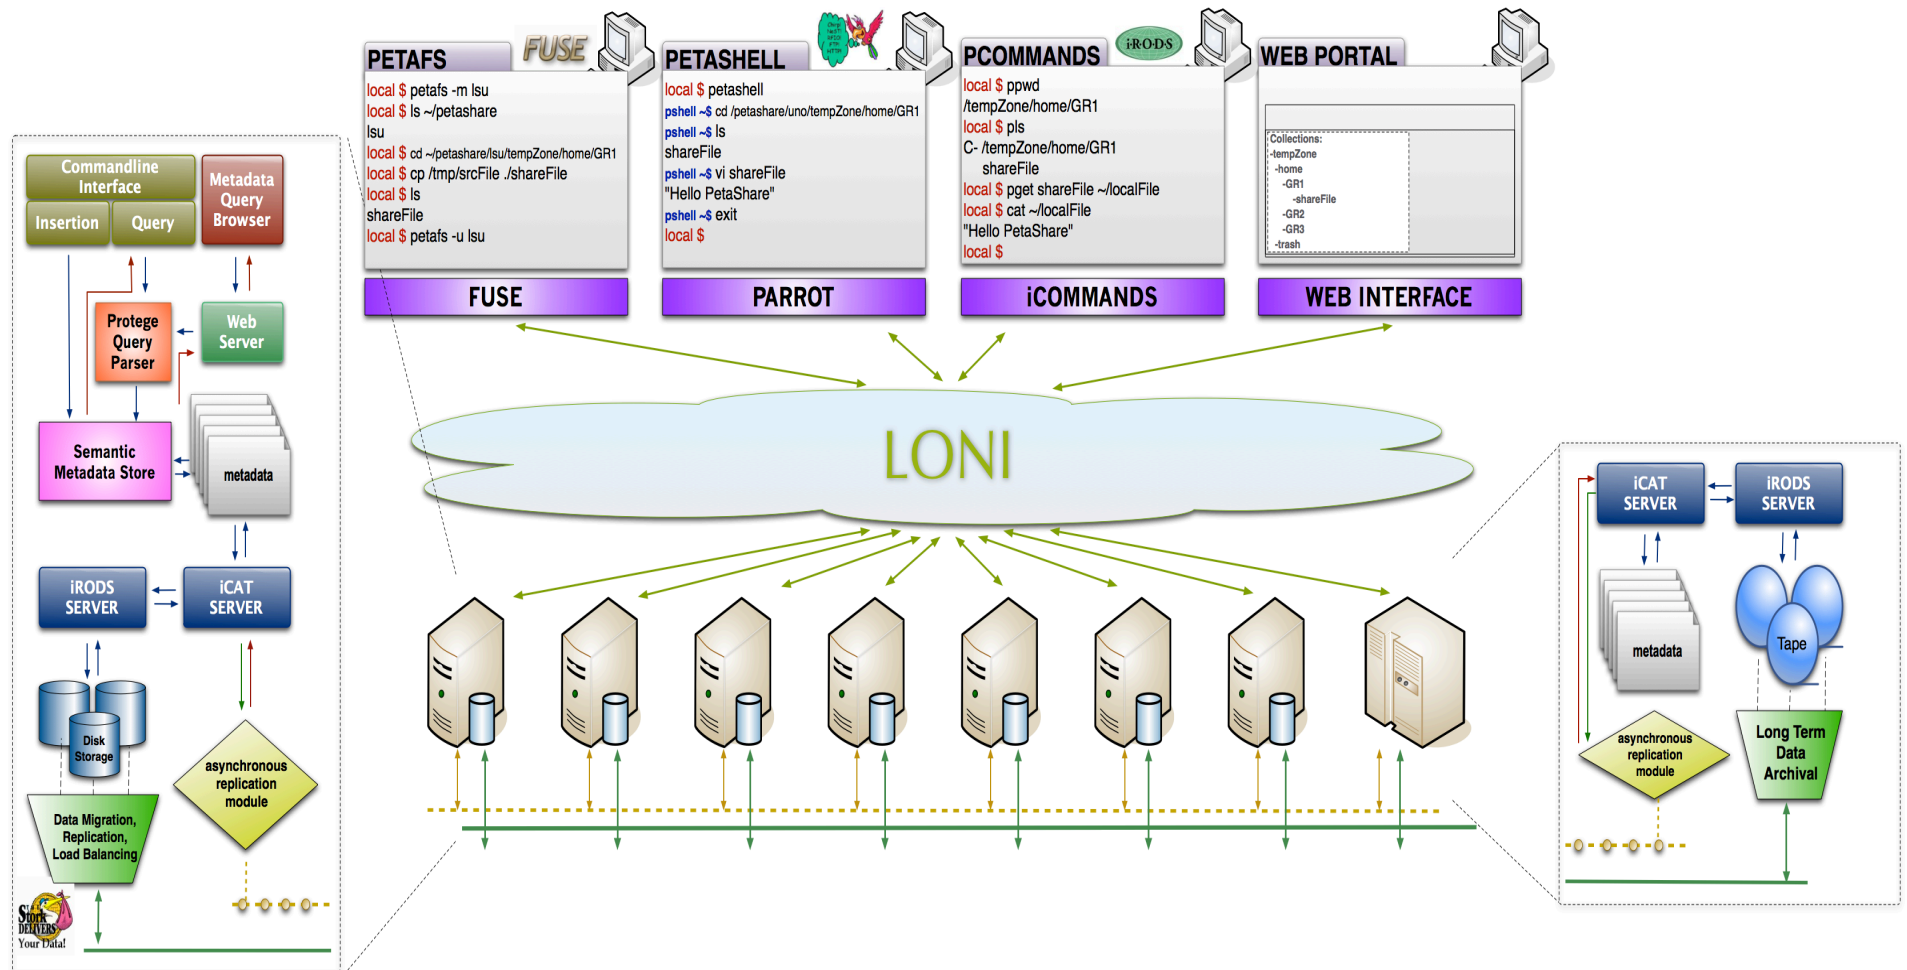

Participating institutions in the PetaShare project, connected through LONI. Sample research of the participating researchers pictured (i.e. biomechanics by Kodiyalam & Wischusen, tangible interaction by Ullmer, coastal studies by Walker, and molecular biology by Bishop).

Infrastructure Overview

A system driven by the local needs (in LA), but has potential to be a generic solution for the broader community!
