A Service-Oriented Interface to the iRODS Data Grid

Nicola Venuti, Francesco Locunto Nice S.r.l.

> *Michael Conway DICE Center – UNC*

> > Leesa Brieger RENCI - UNC

The Many (Inter)Faces of a Data Grid

- Simple data browser
- Access to specialized services (administrative)
 - audit tracking
 * usage/quota monitoring
- Access to a subset of services (user)
 - audit only my own files
 check my own usage
- Different views and services for different communities (e.g., a university institutional repository):
 - librarian

- * data administrator
- system administrator
- * user groups

The Data Management Toolkit

- Basic iRODS services
 - **Data grid architecture and support**
 - **DCAPE** archival policy implemented into services
 - **ERA module services**
- iRODS framework
- Libraries of specialized services developed by grid deployers
- Specialized data grid *interface* to:
 - provide intuitive access to customized services
 - separate IT from data management (separate data grid deployment from usage)
 - a enable data administrator ≠ iRODS programmer

The EnginFrame Interface

- Current version created as a demo platform
- Showcase for core iRODS services
 - audit tracking
 - quota/usage monitoring
 - metadata services
 - rule editing and running
- User-friendly and intuitive
- Proprietary software from Nice S.r.I., available to iRODS users

Audit Services

- Must query iCAT audit information
 - msiMakeGenQuery and msiExecGenQuery
 - iquest
 - differences in performance, control, results
- Audit table contains ID of the "object" in question
 - * user
 - data object
 - collection
- Series of iquest commands to yield correct result
