

IRODS Client Development

Mike Conway
DICE UNC Chapel Hill
michael_conway@unc.edu

Jargon-core

- At 3.0.0.1 Release now
- <https://code.renci.org/gf/projects/jargon>

Jargon Priorities

- Support for iDrop -web -lite -desktop
- Interfacing with RENCID/DICE CI
 - 'cross zone' fixes and certification
 - Mounted collections/soft links
- Security (GSS, Kerberos) in branch
- Tickets (in branch)
- Optimization (knobs, benchmarks, profiling)

iDrop Suite

- At <https://code.renci.org/gf/project/irodsidrop/>
- Release planned for iRODS 3.0.1
- 'Cloud in a box'

iDrop

- More synch modes
- 'Diff' tool
- Transfer enhancements
 - PREMIS metadata
 - Control balancing/audit reports
 - Adding heuristics for recovery/restart
 - GUI not so stupid
 - Restart in middle of long file

iDrop Web

The screenshot shows the iDrop Web interface in a browser window. The address bar displays `myDrop - iRODS Personal Cl...` and `iren-web.renci.org:8080/idrop-web/`. The interface includes a search bar with the text "Search as a file" and a "Go directly to a path in the tree" link. Below the search bar are tabs for "Browse" and "Search", and a "Refresh" button. The current path is `/ renci / home / rods`. A file tree on the left shows the directory structure, with `rods` selected. The main area displays a table of collections with columns for checkboxes, names, types, dates, and sizes. A right sidebar contains "Tags" and "iDrop Desktop" tabs, showing a list of tags like `proposals`, `derby tagga1`, `idrop-web`, `ameliaerhart`, `baam`, `joebob log4j`, `irods aeroplanes`, `replicated ameli`, `rods tunes tagga`, `hello`, `test state`, `idrop-lite`, `goodbye`, `demo idrop`, `maven`, and `ANT`.

iDrop Lite – Bulk Upload

The screenshot shows the iDrop Lite web interface. The browser address bar displays the URL: `myDrop - iRODS Personal C... iren-web.renci.org:8080/idrop-web/#bulkuploadDetails`. The page title is "iDrop - iRODS Cloud Browser".

The interface features a navigation pane on the left with a tree view of the file system. The current path is `/renci/home/rods`. The main content area displays a "Local File System" view with a file browser showing various directories and files. A "Files(s) to Import" dialog box is open, showing the current import location as `/renci/home/rods`. The dialog includes a table for listing files to be imported, with columns for "File Name", "Progress", and "Cancel/Re...".

The right-hand sidebar contains a "Tags" section with a list of tags including: proposals, derby, tagga1, idrop-web, ameliaerhart, baam, joejob, log4j, irods, aeroplanes, replicated, amelia, rods, tunes, tagga, hello, test, state, idrop-lite, goodbye, demo, idrop, maven, and ANT.

Metadata Replication Move to Trash

Transfer Type: Files / Bytes (total): /

Current File: User: rods 0%

Manage Pause

Emerging Needs

- Metadata and findability
 - Controlled vocabs (HIVE)
 - Faceted Browsing
 - AVU ↔ Triple Store
 - Search?
- Social network overlay
- REST (prerequisite for →)
- Mobile clients (iOS and Android)

iRODS in the Toolbox

- Adapters and framework implementations to make it easier to add iRODS capabilities to apps of all kinds.
- PHP/Drupal
- Akubra for Fedora
- DSpace
- THREDDS
