# How we do replication

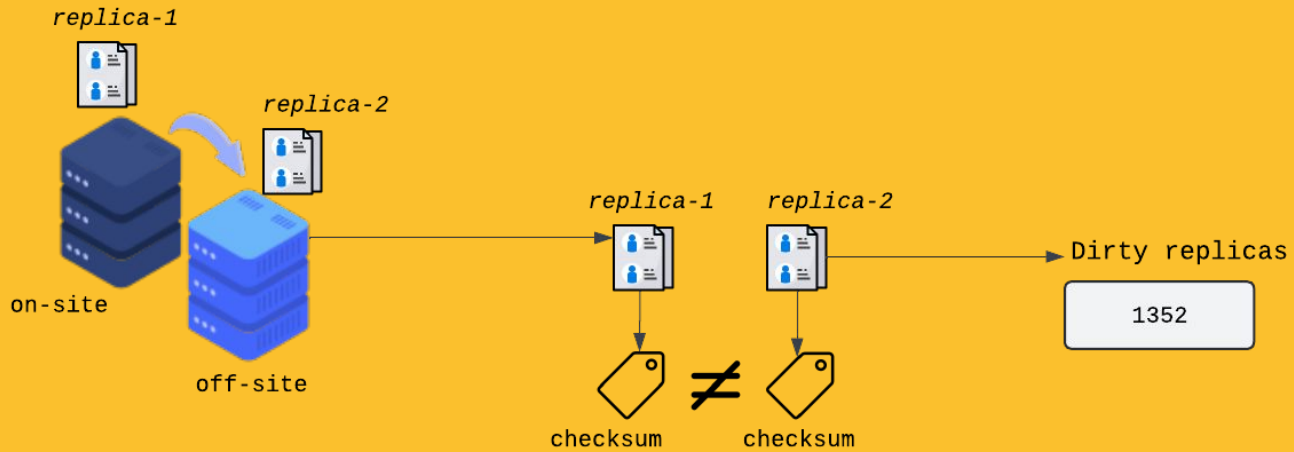

# Resource tree

## Issues with replication: Single replicas

# Issues with replication: Dirty replicas

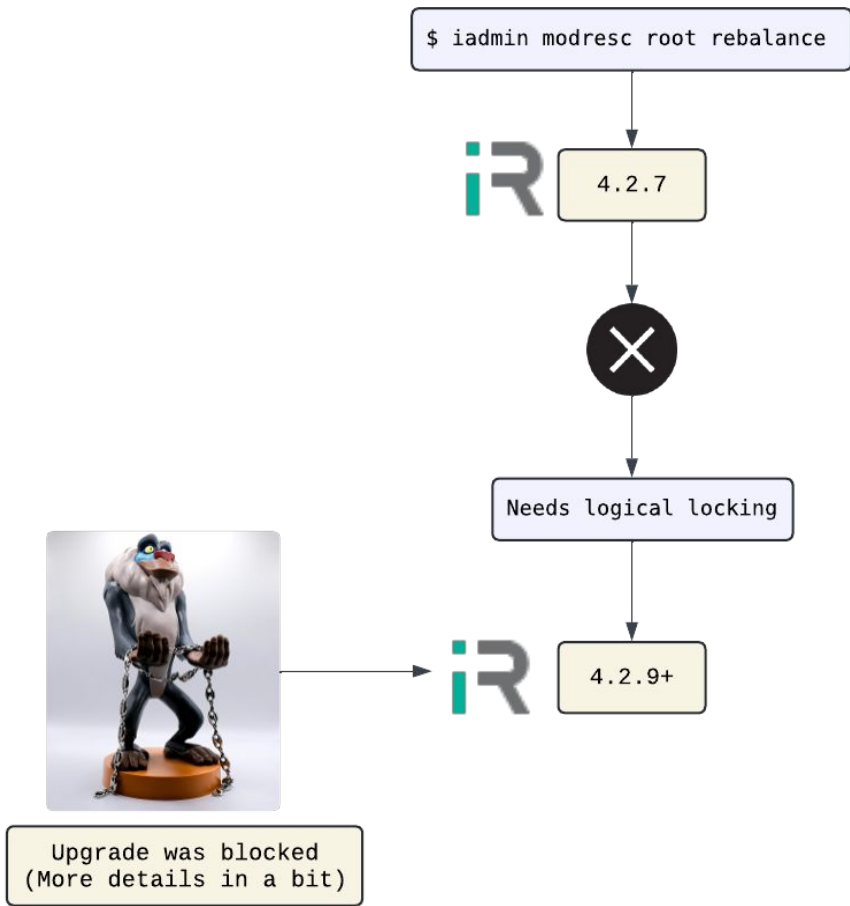

# Issues with replication: Triple replicas

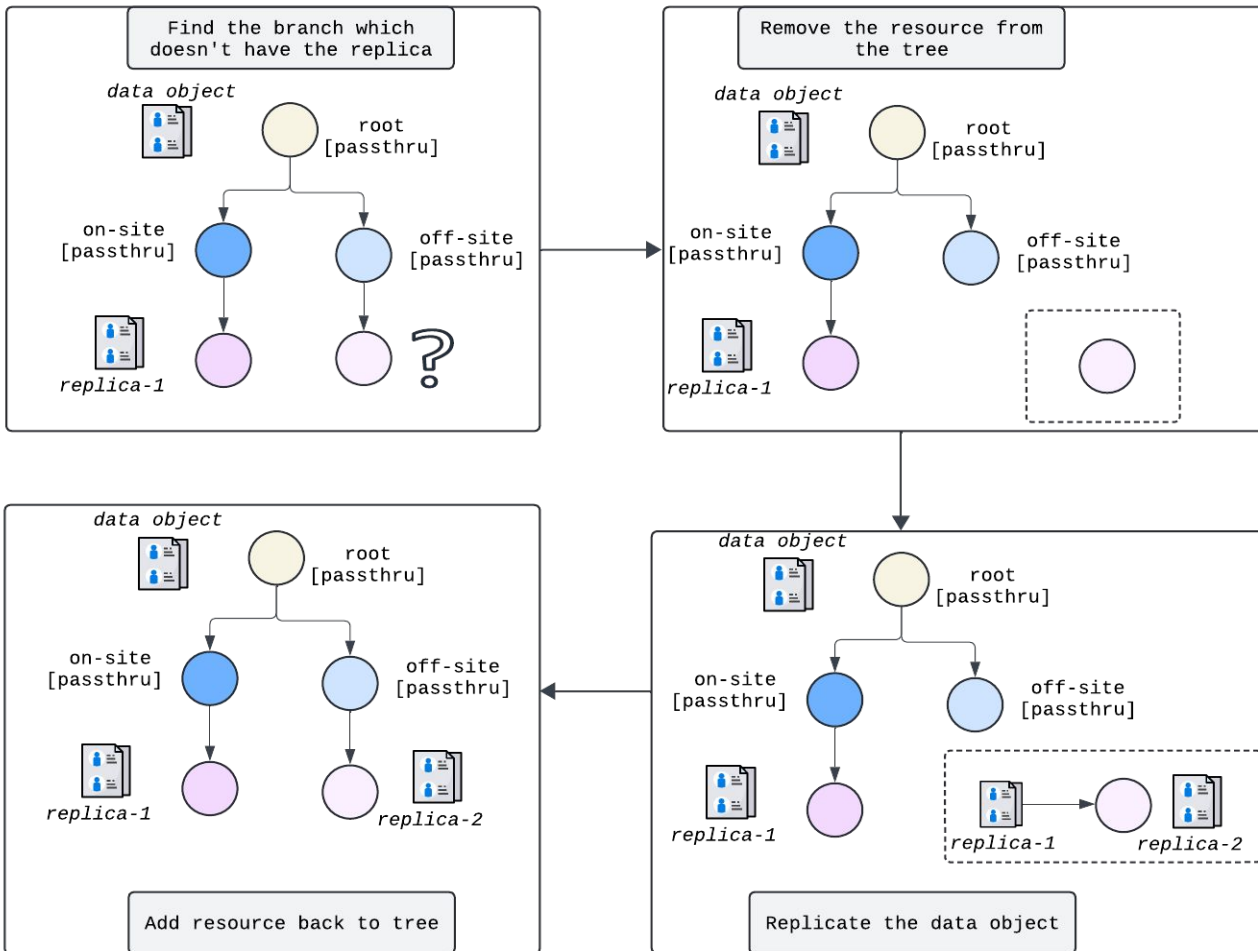

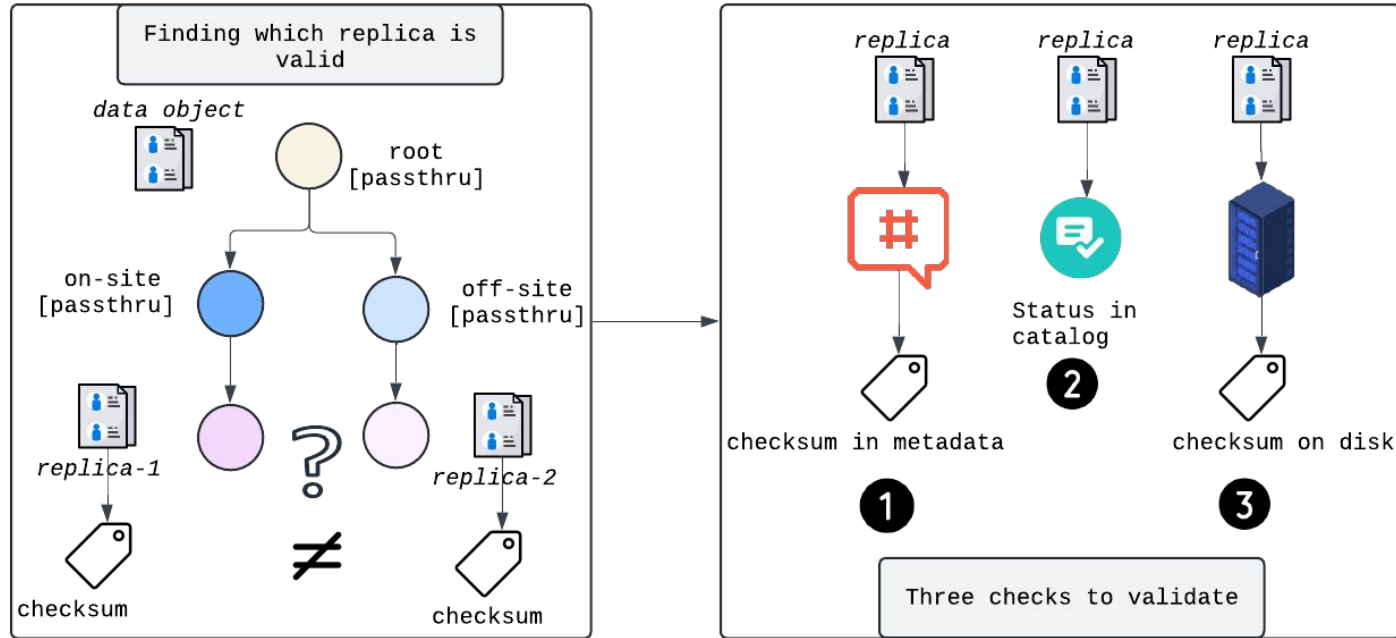

Hakuna Matata!

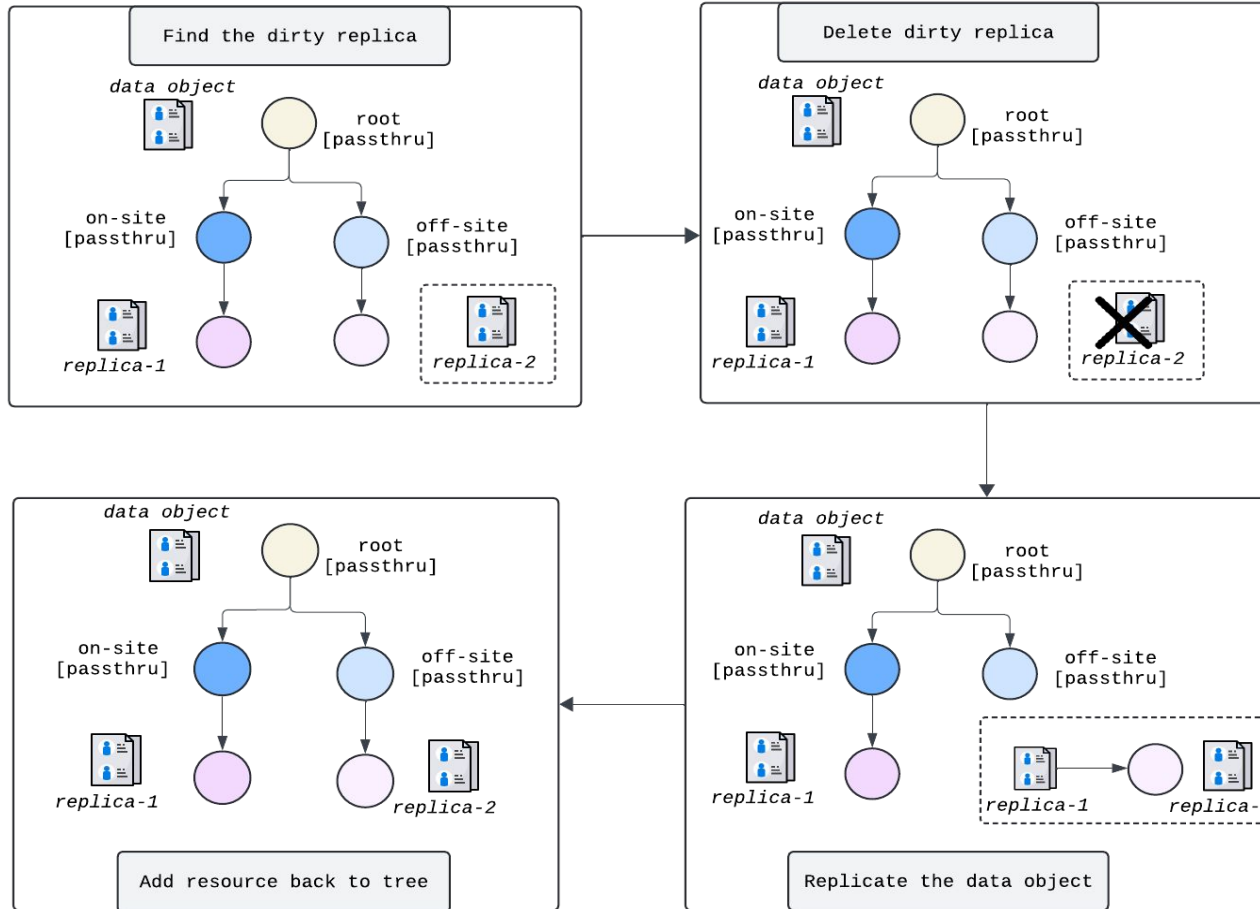

# Fixing single replicas

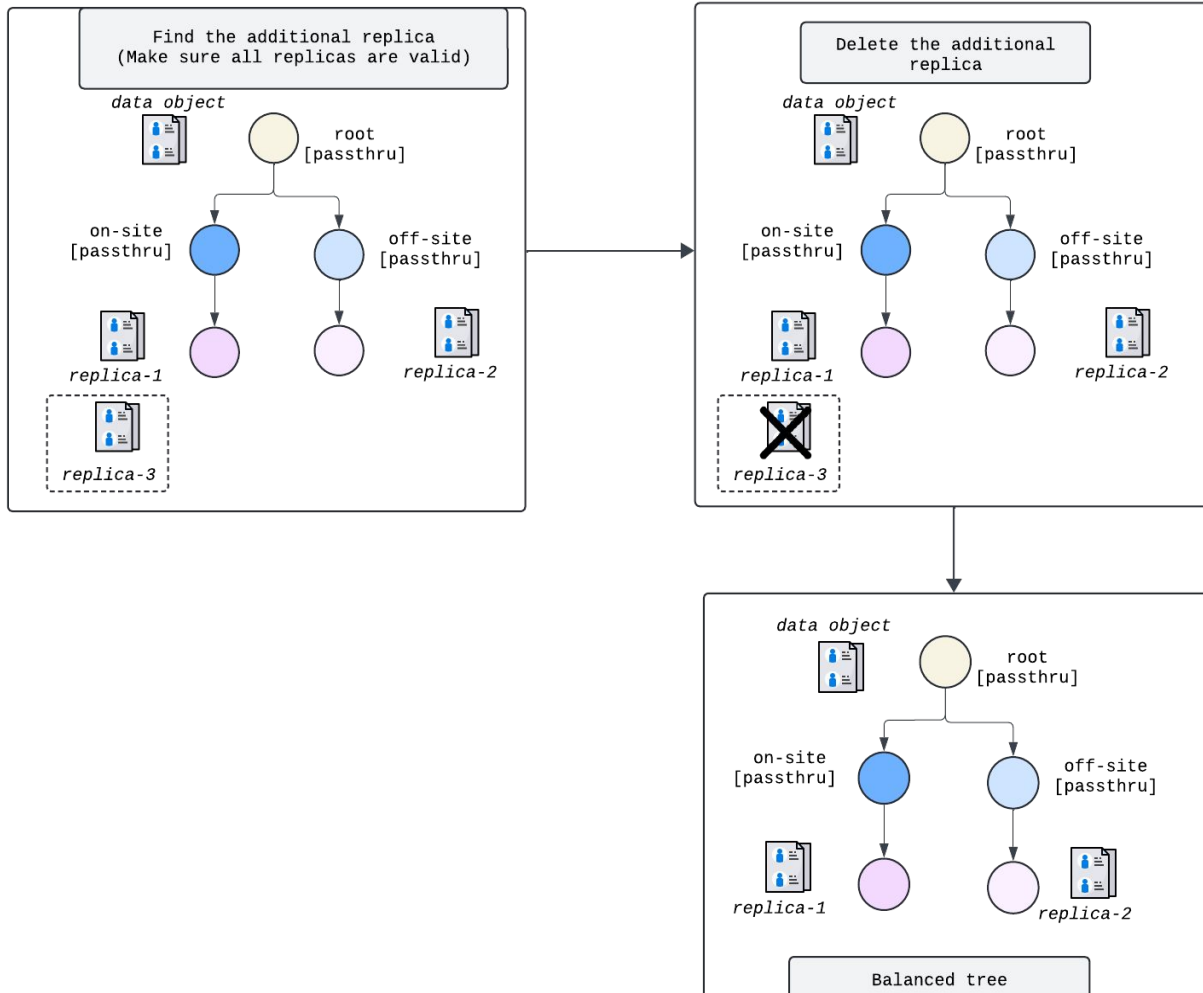

# Identifying dirty replicas

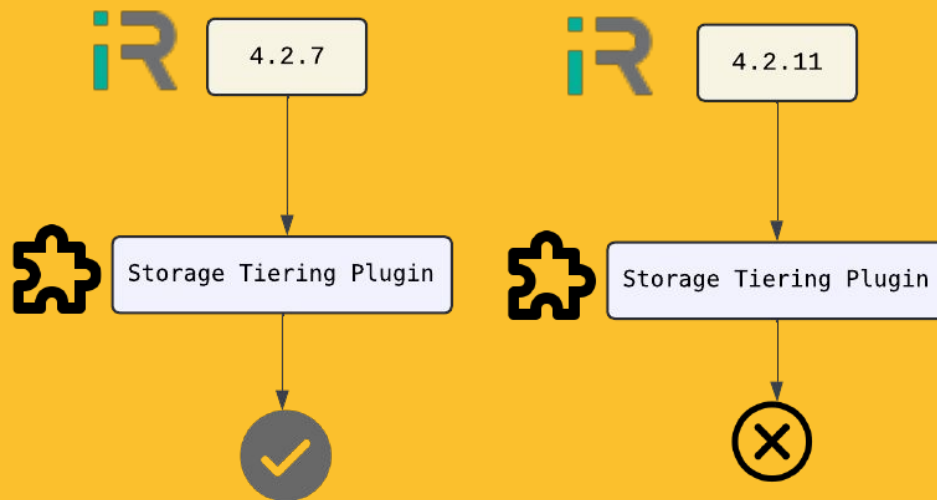

# Resolving dirty replicas

# Resolving triple replicas

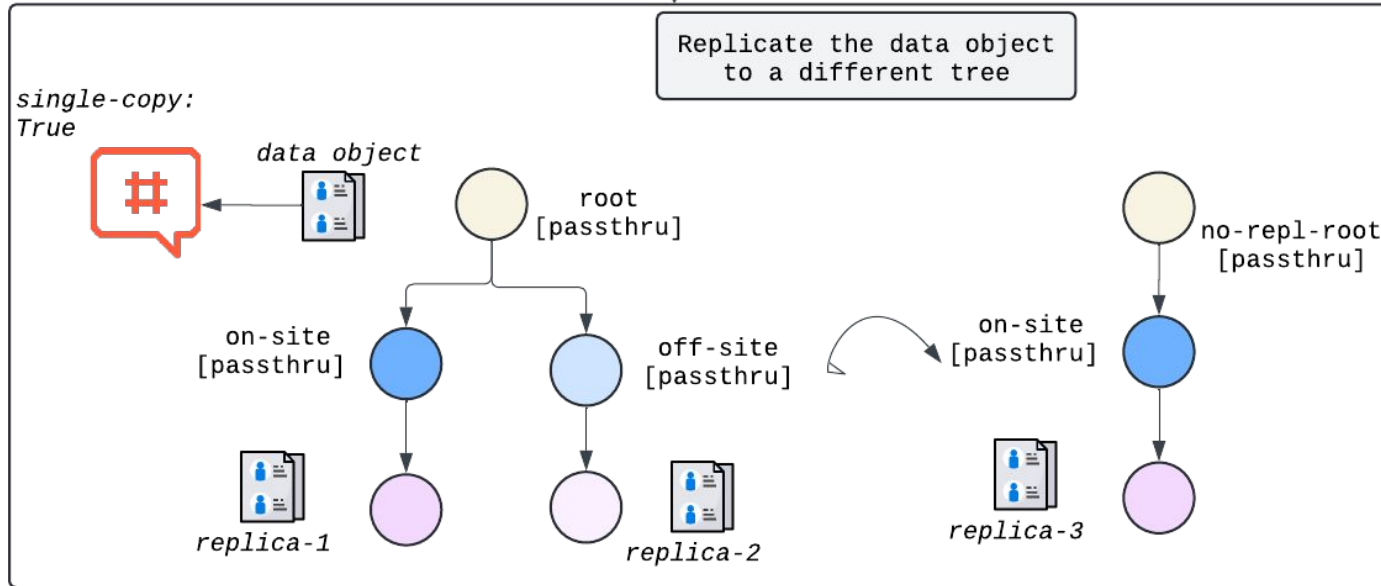

# iRODS upgrade: Blocker

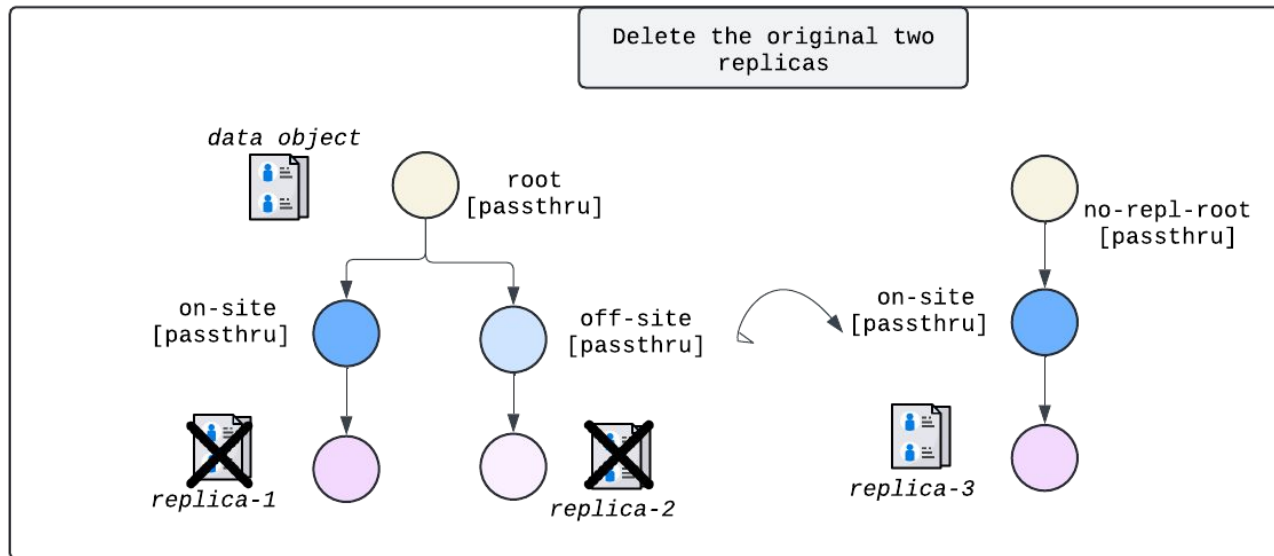

# iRODS upgrade: storage tiering plugin

Storage Tiering Plugin

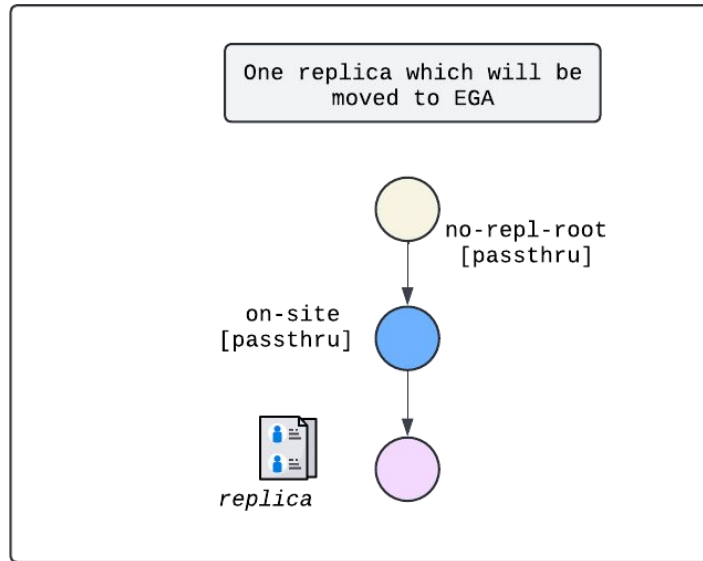

# iRODS upgrade: storage tiering plugin contd.

# iRODS upgrade: storage tiering plugin contd.

## Challenges with current architecture

- 1** iget requests overwhelm database
- 2** Large number of servers become difficult to manage
- 3** Files have to be staged on an intermediate file system

## iRODS world: Future

- 1 User can directly access the data objects
- 2 The file system will abstract all the servers.
- 3 Replication will be managed by the file system
